- Control HVAC Setback Automatically
- Demand Control
- Patented 5 Star Humidity Control
- Engineering Default Alarms
- Security Monitoring
- Mini Bar Reporting
- Privacy Please!®
- Additional Productivity Savings
- Occupancy Reporting
- Remote Messaging

innPULSE®

Wireless
[RF]]]]
or
Hardwire

Surpassing typical energy management systems, innPULSE® Guestroom Operations Manager is an advanced in-room information system with innovative features designed specifically to reduce operations expenses, improve guest services, and closely monitor guestroom information in your property. innPULSE® is Windows® based (NT compatible).

innPULSE® provides a total guestroom information and management system which benefits engineering, food and beverage, security, front office, and housekeeping operations. innPULSE® virtually manages and monitors your guestroom operations 24 hours a day, even when you are not there.

The innPULSE® Guestroom Operations Manager expands your in-room guest services into an interactive, on-line communication network. innPULSE® directly links your electronic locks, safes, mini-bars, smoke detectors, and HVAC system with individual departments throughout the hotel via existing cable TV wiring. innPULSE® provides management with on-line alarms, control functions, and operational reports.

At the heart of innPULSE® is the SensorStat® DDC, a smart, programmable HVAC controller and occupancy based digital thermostat.

Keeping your expenses down and guests comfortable, while staying ahead of the competition is today's challenge. In addition to providing the ultimate in guest comfort, innPULSE® will help your managers reduce labor costs, control excessive energy consumption, and extend the efficiency and longevity of your furniture, fixtures, and equipment.

Now more than ever, it is easier and less expensive to reduce operating expenses, improve guest comfort and, at the same time, increase the return on your total hotel investment with the innPULSE® Guestroom Operations Manager.

Energy Products, LLC is a leading provider of Eco-Friendly Energy Management systems and services for the Hospitality, Corporate, Education and Government markets.
